

EPM Live Enterprise for Microsoft® Office Project Server 2007

EPM Live *Enterprise* gives organizations tools to manage projects at every level of the enterprise. *Enterprise* layers strategic project decision making functionality onto the collaboration and project management tools that teams need to be effective. EPM Live *Enterprise* combines the richness of Microsoft® Office Project 2007 with Microsoft® Office Project Server 2007 Online Services for executive level visibility and control.

EPM Live *Enterprise* provides advanced visibility and control of enterprise wide project portfolio investments. It gives C-Level executives, PMO directors and VP's the 'Big Picture' views that they need to make strategic business decisions and manage project portfolios. *Enterprise* helps decision makers monitor project performance, visualize trends, manage resources across the organization and identify investment gaps to maximize their project investments.

Enterprise is subscription based software (software + service) that offers powerful Microsoft Enterprise Project Management (EPM) functionality without the high cost of ownership. With EPM Live, there are no long term contracts to sign. Organizations pay-as-they-go with this low risk, low cost, opportunity to get the most from project investments.

Data Storage	44%	Green	Checkmark	3/5/2007	9/14/2007

Project portfolio visibility provides project summary level details

Strategic Project Management

EPM Live *Enterprise* provides visibility and control of enterprise wide project portfolio investments.

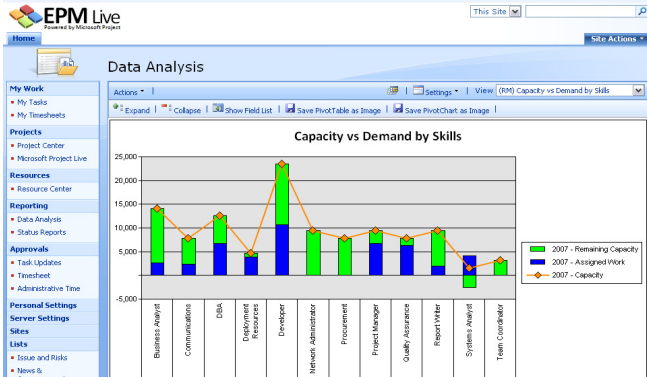

View project portfolio investments across the enterprise. Summary level reports provide big-picture views of project portfolios and quick access to project-specific details. Decision makers can view all their projects across the enterprise and sort and filter for the information they need to make informed decisions.

Perform detailed analysis. *Enterprise* enables detailed analysis on project and resource performance. It gives executives interactive graphs and charts that help them identify trends and make accurate business decisions. Users can build and share online Gantt charts and create custom reports that give them the details they need.

View project details. Executives have access to greater levels of project detail and can interact using their internet browser. *Enterprise* centrally manages all project-related information and provides detailed views of individual projects including schedules, cost performance, roles and much more.

Manage resources. Resource dashboards give decision makers tools to manage resources and project inter-dependencies across multiple projects and programs. It provides details about individual resource availability and task assignment by time period. Graphical displays give immediate insight into overall team capacity and help executives make accurate decisions based on resource availability.

Use timesheets and tasks. *Enterprise* includes timesheet tracking tools that are integrated with task management features. This makes it simple to record time worked to specific projects and schedule workloads.

View and manage resource allocations across the enterprise.

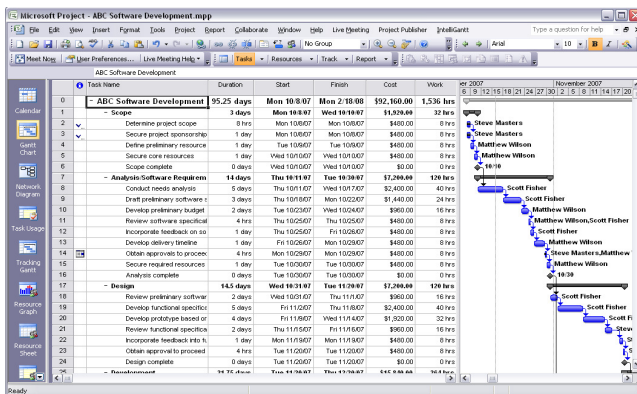

Project Management

In addition to the strategic functionality for decision makers, *Enterprise* also provides features that project managers need to create effective project plans.

Plan Efficiently. Project managers can create effective project plans using the tool that experts prefer, Microsoft® Office Project 2007. The *Enterprise* solution easily publishes and synchronizes Microsoft® Office Project 2007 plans to online workspaces where team members view and update project details and collaborate on projects.

Collect “real time” progress updates. *Enterprise* gives project managers tools to request, review and approve all task progress and updates in one single view. Flexible communication options also allow requests for progress on individual tasks.

Share Key Milestone and Deliverable Information. Project managers publish key project milestones and deliverable dates and always keep everyone informed of major events and deadlines.

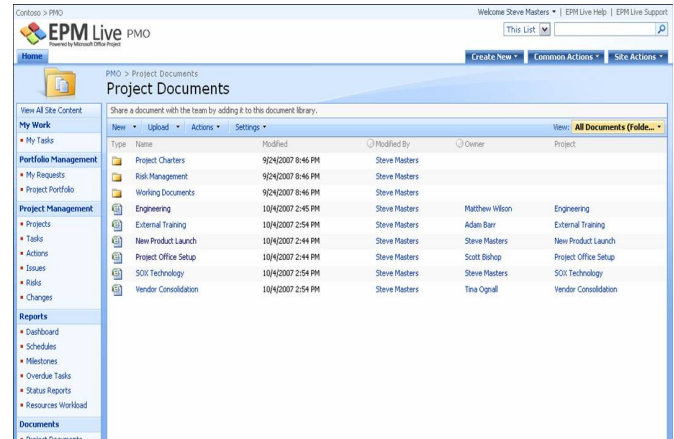

Manage project schedules, resources and financial information using Microsoft Office Project 2007 Professional.

Team Collaboration

Enterprise helps team members collaborate effectively.

- Centralize and manage documents.
- Facilitate online discussions and announcements.
- Share project calendars & events.
- Track and manage active issues and risks.

Create folders and organize project documents in a central location

Build-to-Order

Enterprise-wide EPM solutions are typically configured to meet the particular needs of businesses and organizations. Customized solutions are a costly investment in time, resources and capital. EPM Live *Enterprise* streamlines this process with a unique and innovative “Build-to-Order” service that drastically reduces the cost, risk and time associated with successful deployments. Build-to-Order helps organizations tailor their Microsoft EPM Solution using industry best practices to fit specific requirements. EPM Live’s questionnaire guides organizations through the selection of the appropriate solution configurations and settings. The EPM Live Build-to-Order service combines the power of the Internet with EPM Live’s product knowledge and automation expertise to deliver a customized Microsoft EPM Solution in days, rather than weeks or months.
